

## Heat Meter Programme Update for DMC Reps

At a recent DMC round of meeting there was a request for our Capital Work Team to share with you information on the Heat Meter Programme. Attached is a spreadsheet which lists all the properties that either have heat meters or will receive them in the near future. Many of you may ask why certain blocks are or aren't included in the programme – below is an explanation.

### **1. Why are certain estates selected over any other properties and what was the selection criteria?**

Camden began its heat metering retrofit programme in 2009 at Kiln Place, followed by other sites in later years (known internally as Phase 1, Phase 2 and Phase 3 sites). The heat meters in these phases of the programme were retrofitted in two stages – first a meter installation by a general contractor, and second the connection of the meter communications by a specialist heat metering engineer to get the resident's heat data to Camden's systems for charging purposes. This informed our retrofit programme content and order up until 2020 as the meters had been fitted in resident's homes so we wanted to connect them up.

These phases covered certain homes and blocks at the following estates: Chalcots, Kiln Place, Ampthill, Henderson Court, Kenbrook, Kennistoun, Snowman, Casterbridge, Churchway, Doric, Hampstead Rd (partial), North Gower, George Mews, Mary Green, Hastings House, Penshurst, Rothay, Waxham, Ludham, Una House, Templar House, Seymour House, Somers Close, Platt St, Purchase St, Constable House, Tolmer Sq. We are currently approaching the end of Phase 3.

In addition during these years we retrofitted meters as part of several Capital Works projects (where an estate was having a bigger heating upgrade) and also for regeneration projects so the meters were fitted as part of the new build development. These estates were: Bacton, Bourne, Netley, Maiden Lane, Agar Grove, Regents Park, Abbey, Chester Balmore, Holly Lodge, Central Somers Town, Charlie Ratchford, Harben

Road, Monica Shaw and Mansfield Road. These works are currently underway at St Silas, Highgate Newtown and Maitland Park.

The Heat Network (Metering and Billing) Regulations 2014 required us to meter homes where technically and financially viable, but the government put their tool for assessing viability on hold for several years while they redesigned the tool so it was fit for purpose. In the meantime we continued with the above phases of our heat metering programme.

The Heat Metering Regulations were amended in 2020 and a new cost effectiveness tool published. We applied the tool to all the remaining homes on our heat network, with the result that 157 homes still needed to be metered. The rest were either exempt from metering under the Regulations (including Camelot House) or deemed not cost effective through the tool.

These 157 homes are going to be prioritised under the next phase of our heat metering programme (Phase 4) as they are the ones we are legally required to meter. These are certain homes at Sanderson Close, Cressfield and Woodyard Estate, Lymington Road Estate, Netherwood Estate and Bacton Estate. This part of the programme is in procurement phase and we intend to do the meter installs later this year.

We still have plans to meter as many other homes on our heat network as possible, including those we are not legally required to meter. However the speed of the rest of the programme will depend on budget, resource, supplier constraints and resident access issues. We may also decide to change our retrofit approach and install meters as part of bigger heating upgrades as estates, rather than as standalone work. These are all decisions that will be made in the future by senior management.

It should be noted that for all residents in a block / estate to switch to heat meters we require at least 70% take up otherwise we can't switch residents over to this new way of billing.
